

NetSuite Solutions for the CFO

Get the real-time data, financial reports, and forward-looking insights you need in one system.

CFO's Ultimate KPI Checklist.

Financial and Operational Leadership

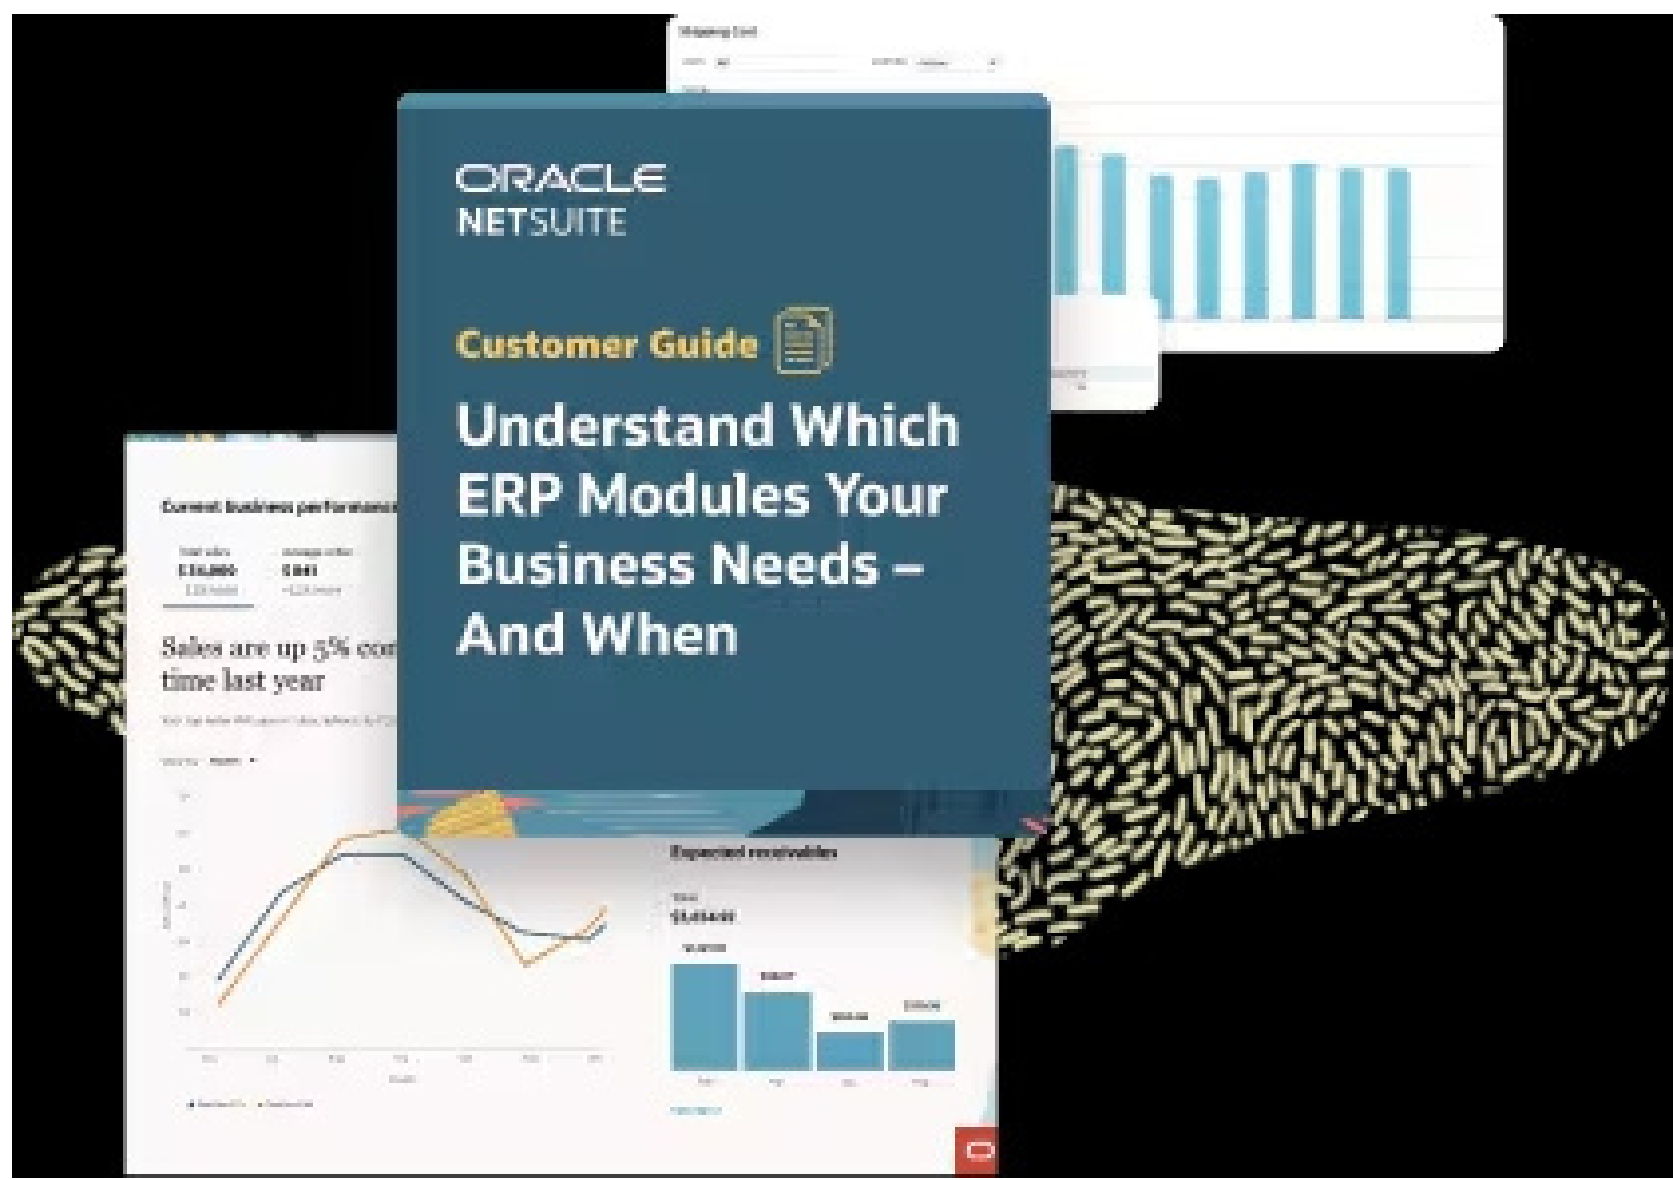

CFOs are shouldering greater responsibilities than ever before. In addition to maintaining robust financial controls and overseeing cash flow, they are now tasked with providing more accurate forecasts, assisting in talent acquisition and retention, and spearheading efforts to implement and enhance technology for the benefit of the entire organization. Furthermore, they are increasingly called upon to apply their financial insights to new growth strategies and other critical decisions.

NetSuite streamlines end-to-end business processes with a comprehensive suite of cloud-based applications, relied upon by over 40,000 companies daily. Our clients have successfully gone public, secured substantial funding, expanded globally, and managed rapid growth on the NetSuite platform, all while upholding stringent controls within an audit-ready system.

It's a system that empowers CFOs to capitalize on the opportunity to become one of the most trusted and respected decision-makers in their organizations.

Key Benefits:

- **Enhance efficiency** Automate routine processes, saving time, improving accuracy, and increasing visibility with a unified system.
- **Identify cost savings** Track KPIs and reports to find bottlenecks and improve financial performance.
- **Provide insights** Monitor cash positions and analytics for strategic decision-making to boost profits.
- **Ensure compliance** Manage adherence to financial regulations like SOX and VAT.
- **Build a skilled team** Recruit motivated employees to leverage technology for insights and innovation rather than just data processing.

Enhance Decision-Making

From day one, realize the value of real-time financial and operational dashboards that display customizable KPIs, cash flow, key reports, budget information, and other critical data. CFOs and their teams can tailor these dashboards to their exact preferences. Embedded reporting and analytics foster smarter, faster decisions that can support your business’s success and accelerate.

Financial Oversight, Planning, and Reporting

As financial planning and analysis becomes an increasingly big part of the CFO’s role, your team can quickly and easily produce budgets and forecasts, model what-if scenarios, and generate more advanced reports in NetSuite. The application automatically pulls financial, operational, and headcount data to generate these models and reports, making it easy to update them and preventing costly mistakes.

Optimize and Automate Business Processes

NetSuite’s unified solution for operational, customer, employee, and financial data and processes offers many advantages over individual departmental systems. This helps boost the efficiency and accuracy of order-to-cash, procure-to-pay, and other critical processes that touch multiple departments because everything is connected. NetSuite speeds the financial close process and automates other cumbersome, manual tasks, freeing finance to focus on more strategic initiatives and preventing the need to constantly add headcount as you grow.

Governance and Compliance

NetSuite provides the built-in financial controls, audit trails, and compliance reports you need to reduce the risk of fraud and noncompliance. You can limit each employee’s access to what they need to do their job and codify approval workflows to proactively avoid these issues.

Enhance your intelligence with a platform that provides visibility, scalability, and flexibility, enabling your business to grow at a quicker pace.
